After that is done, the cement walls for the foundation will be run up, and the cement floor to the basement be laid. The first story of the new portion will then go up as fast as men can put brick and mortar together. The process of raising the present building to a two story, together with the installation of a new front, without embarrassing business operations in the store will present interesting problems, but the architects know how to do it, and traffic will be carried on as usual. The entire building is to be heated with a furnace to be located in the basement under the new portion. It is expected to have the whole structure completed during the month of September.
